Safeguarding Bulletin

ISSUE 14

Mount Kelly's Safeguarding Bulletin aims to provide parents and carers with the information needed to have informed and age-appropriate conversations with their children about potential risks in the wider world and online. This week's bulletin is on the topics of screen addiction and self-regulation.

It can be challenging for parents and carers to know whether children are spending too much time on their devices. Furthermore, it can be even more of a conundrum to decide whether a child is genuinely addicted to the internet and social media. As technology is becoming more pervasive, children and young people are experiencing tech-related dependencies. As trusted adults, do we have the right knowledge to identify and support young people who may be developing an addiction to their devices? The first of our **#WakeUpWednesday** guides (on the next page) provides tips for avoiding potential risks such as damage to health and wellbeing, app addiction and a lack of sleep.

Learning to deal with everyday difficulties and the ability to manage our feelings, thoughts and behaviours in effective ways – known as **self-regulation** – is gained gradually through childhood and into adolescence. It's acknowledged as a pivotal element in young people's development but can prove trickier for some children to master than others.

In the second of our **#WakeUpWednesday** guides this week, you'll find expert suggestions on ways of supporting children as they build their ability to self-regulate. Demonstrating how you process your own emotions – and electing appropriate literature and other resources – figure in this collection of practical tips on helping young people on their journey towards self-regulation.

It can be challenging for parents and carers to know whether children are spending too much time on their devices. Furthermore, it's even more of a challenge to know whether a child is addicted to the internet and social media. As technology is becoming more pervasive, children and young people are experiencing tech-related dependencies. Do we as parents and carers have the knowledge to identify and support children and young people who may be developing an addiction to their devices?

47% of parents said they thought their children spent too much time in front of screens

What parents need to know about SCREEN ADDICTION

HEALTH & WELLBEING

Children as young as 13 are attending 'smartphone rehab' following growing concerns over screen time. There are now help centers in the UK which deal with screen addiction for children and adults showing the seriousness of device addiction. The World Health Organisation (WHO) has officially recognised gaming addiction as a modern disease. The condition was confirmed as part of their International Classification of Diseases (ICD) which serves as an international standard for diagnosing and treating health conditions.

LACK OF SLEEP

7 out of 10 children said they had missed out on sleep because of their online habits and 60% said they had neglected school work as a result. It is important that children get the sleep they need in order to focus the next day.

LOSS OF INTEREST IN OTHER THINGS

Your child may become less interested in anything that does not include their device. You may notice that your child is missing school time and generally being less engaged with other activities in the home. It is important to discuss this with your child as soon as you notice a behaviour change.

CONFIDENCE, SUPPORT & ADVICE

The Children's Commissioner report 'Life in Likes', explored how children aged 8-11 are using social media today. It showed that children are using their devices to speak to their online friends about their problems and seek acceptance and support, removing face to face interactions.

APPS CAN BE ADDICTIVE

Apps have been designed with 'psychological tricks' to constantly keep grabbing your attention. One example of this is on the app Snapchat, where you can gain 'streaks' when interacting with your friends. If you don't respond, you lose the streak. This addictive nature of apps aims to engage children and keep them coming back for more.

Top Tips for Parents

LIMIT SCREEN TIME

In today's digital age, technology is an important part of a child's development so completely banning them from their device will mean they are missing out on a lot, including conversations and communication with their friends. Rather than banning them from using their devices, we suggest setting a screen time limit. Work out what you think is a suitable and healthy amount of time for your child to be on their device per week. Remember that your child may need to use devices for their school homework so only set screen limits on recreational time on their device. Once you have established this, have the conversation with them to discuss why you are implementing a screen limit. There will be others in your child's friendship group who will not have screen limits set and will be sending messages when they do not have access to their phones.

LEAD BY EXAMPLE

Children model their behavior on their peers, so if their parents are constantly on their device, they will see this as acceptable. Try limiting your own screen time and follow the same rules you have set for them. If you have asked your child to not use their device at the table, make sure you don't. Try setting house rules that the whole family abide by.

REMOVE DEVICES FROM THEIR BEDROOM

Setting a rule about removing devices from bedrooms will help your child to get the sleep they need and be more focussed the next day at school. 20% of teenagers said that they wake up to check their social network accounts on their devices. Even by having a device switched off in their bedroom, they may be tempted to check for notifications.

LESS TIME MEANS LESS EXPOSURE

There are many risks associated with devices, such as cyberbullying, grooming, sexting, viewing inappropriate content etc. Less time spent on a screen means that a child will be less exposed to these risks.

MOBILE-FREE MEAL TIMES

Have you tried to settle your child by giving them a tablet at the dinner table or restaurant? This may seem like a quick fix to calm them down but in reality, it is encouraging them to use their device as a distraction from conversation and dealing with their emotions. We suggest removing all technology from the dinner table and having conversations with your family about how their day has been.

ENCOURAGE ALTERNATE ACTIVITIES

It may seem like an obvious solution, but encouraging children to play with their friends, read a book, or playing outdoors will help them realise they can have fun without their device. Playing football, trampolining, camping, going for a walk or swimming are all healthy replacements for screen time. Try to join them in their Outdoor activities to show your support.

STATISTICS

52% of children aged 3-4 go online for nearly 9hrs a week

82% of children aged 5-7 go online for nearly 9.5hrs a week

93% of children aged 8-11 go online for nearly 13.5hrs a week

99% of children aged 12-15 go online for nearly 20.5hrs a week

10 Top Tips on Supporting Children with SELF-REGULATION

Children need to learn to understand and recognise their emotions, while finding healthy ways to process them. Emotional self-regulation, however, depends heavily on age and development. While very young ones or children with special educational needs and disabilities (SEND) may find it particularly challenging to self-regulate, nurturing these important skills can be hugely beneficial. Here are ten top tips for supporting children with their self-regulation.

1. DESIGNATE A TRUSTED ADULT

It's vital that children feel safe and know that there's someone they can always go to for help if they need it. Schedule consistent times for the child to develop a relationship with this person – ideally through play and games – allowing trust to grow and ensuring that the child is more likely to come forward if anything is wrong, rather than hiding their emotions.

2. MEET CHILDREN HALFWAY

Unless you know where a child is developmentally and tailor your approach to their needs, you're less likely to have an impact. In particular, younger ones and children with SEND can struggle to self-regulate and instead rely on others to help them. We call this 'co-regulation'. Rather than offering strategies for self-regulation, it could be better to start co-regulating with a trusted adult first.

3. FACTOR IN THEIR BASIC NEEDS

Remember that for a child to develop emotional regulation skills, their basic needs must be met first. Children who are hungry, tired, cold and so on – as well as those who have experienced adverse childhood experiences – may struggle to self-regulate. Before you develop strategies with any child, make sure they feel safe, secure and comfortable in themselves.

4. REMAIN PATIENT

If a child is struggling with their emotions, it can often become difficult to stay calm. Remember that dysregulation is beyond their control, so a display of frustration or anger could negatively impact the situation. Instead, children need to be met with comfort and understanding to help them manage these problematic feelings.

5. BE 'A DYSREGULATION DETECTIVE'

While some children can tell you why they become dysregulated, many others can't. You could investigate potential triggers by observing the child and talking to their family. When the child becomes dysregulated, note down details like the time, what they're doing and who they're with – the trigger may be someone they sit near, an unmet sensory need or something else entirely. Once we identify some triggers, we can help to avoid or overcome them.

6. USE SUITABLE LITERATURE

There are some wonderful books that can help you teach self-regulation to children. Reading these with a child can be especially powerful. Take time to discuss the content: ask questions about what feelings the characters had, why they felt that way and what strategies helped them. It can also be useful to refer back to snippets of these books at appropriate moments.

7. TRY SENSORY RESOURCES

An overlap between sensory needs and emotional regulation is possible. Children may struggle to self-regulate if they're experiencing sensory overload (a noisy classroom, for example). Positive sensory input can help calm them down. Use resources such as weighted blankets and fibre-optic lights. Of course, what works for one child might not work for another – so it's important to offer a choice of resources to discover which they prefer.

8. NURTURE INDEPENDENCE

If you feel it's appropriate, let children try out these strategies alone. Always offer them a choice: they could listen to music when they're feeling stressed, for example, or they could write down their worries or draw something to represent how they feel. This may take time for the child to get used to, so be patient. Encourage them to share any helpful strategies with a trusted adult.

9. MODEL GENUINE FEELINGS

Children learn a lot just from watching grown-ups. Don't be afraid to show your own emotions and self-regulation strategies. While you'll obviously want to avoid sharing anything too personal with children, they should still see us experiencing and handling our own feelings. Tell them how you are feeling, then show them how to respond in a healthy manner.

10. FORMULATE A PLAN

As much as we try to prevent children from experiencing dysregulation, it's always wise to have an appropriate plan for when it does happen. Discuss this strategy with the child (if appropriate) and their family. The best approach for an individual child is often a bespoke one; it's hugely important to know in advance what might help and what could worsen the situation.
